II. FUNCTIONAL PARTS LIST 4

*This manual, together with TM 11-6625-224-10P, 12 December 1958, and TM 11-6625-224-20P, 20 January 1959, supersedes DA Supply Manual SIG 7 & 8 AN/USM-24B, C, 19 February 1958.

SECTION I

INTRODUCTION

1. Scope

a. *General.* This manual lists the quantities of repair parts for third and fourth echelon field maintenance and is a basis for requisitioning authorized parts. It is also a guide for fifth echelon in establishing initial levels of spare parts.

b. *Columns.*

- (1) *Federal or technical service stock number* (column 1). The stock number column lists the 11-digit Federal number.
- (2) *Repair parts source, maintenance and recoverability code* (column 2). The source code column is divided into four columns. Columns A, B and D are not used. Column C indicates the lowest maintenance echelon authorized to install the part. Symbols used indicate the following:
"O"—Organizational maintenance (1st echelon).
"F"—Field maintenance (3d echelon).
"H"—Field maintenance (4th echelon).
"D"—Depot (5th echelon).
- (3) *Designation by model* (column 3). Each subdivision of this column will be used for a specific model or for groups of equipment as noted. A dagger (†) in one of these columns indicates that the part is used in that model.
- (4) *Description* (column 4). Nomenclature or the standard item name and brief identifying data for each item are listed in this column. When requisitioning, enter the nomenclature and description on the requisition.
- (5) *Unit of issue* (column 5). The unit of issue is the supply term applied to the smallest quantity by which the individual item is counted for procurement, storage, requisitioning, allowances, and issue purposes.
- (6) *Expendability* (column 6). Expend-

able items are indicated by the letter X; nonexpendable items are indicated by NX.

- (7) *Quantity incorporated in unit* (column 7). This column lists the quantity of each particular part found in a given assembly, component, or equipment.
- (8) *Field (third echelon)* (column 8). The numbers in this column indicate quantities of repair parts authorized for initial stockage for use in the third echelon maintenance and in supply support to second echelon. The quantities are based on 100 equipments to be maintained for a 15-day period.
- (9) *Field (fourth echelon)* (column 9). The numbers in this column indicate quantities of repair parts authorized for initial stockage for use in fourth echelon maintenance. The quantities are based on 100 equipments to be maintained for a 15-day period.
- (10) *Depot (fifth echelon)* (column 10). The numbers in this column indicate quantities of repair parts authorized for depot maintenance and for initial stockage for maintenance, and for supply support to lower echelons. The entries are based on the quantity required for rebuild of 100 equipments.
- (11) *Illustration* (columns 11 and 12). Column 11 is not used. The item No. column (12) lists the reference designations that appear on the part in the equipment. These same designations are also used on any illustrations of the equipment.

2. Additional Repair Parts

Additional items not expected to fail during the first year, but which may be required to perform authorized field maintenance in subsequent years are identified by an asterisk (*) and are to be requisitioned as required for immediate use only. Refer to AR 700-18.

3. Critical Items

A zero slash (Ø) appears in the description column by items that are expected to fail during the first year. The symbol Ø also appears by items that will make the equipment inoperative if they fail.

4. Requisitioning Information

a. The allowance factors are based on 100 equipments. In order to determine the number of parts authorized for initial stockage for the specific number of equipments supported, the following formula will be used and carried out to two decimal places:

$$\frac{\text{Specific number of equipments supported} \times \text{allowance factor}}{100} =$$

Number of parts authorized for initial stockage.

b. Fractional values obtained from above computation will be rounded to whole numbers as follows:

- (1) When the total number of parts authorized is less than 0.5, the quantity authorized will be zero.
- (2) When the total number of parts authorized is between 0.5 and 1.0, the quantity authorized will be one.
- (3) For all values above one, fractional values below 0.5 will revert to lower whole number and fractional value 0.5 and above will revert to the next higher whole number.

c. The quantities determined in accordance with the above computation represent the initial stockage for a fifteen-day period.

5. References

| RF..... | Radio Frequency |
| RTMA..... | Radio-Television Manufacturers Association |
| SPDT..... | single pole, double throw |
| SPST..... | single pole, single throw |
| Cond Prod..... | Condenser Products |

7. Major Items

The major items of this equipment appear in the following sequence:

Oscilloscope AN/USM-24B, C
Oscilloscope OS-26A/USM-24
Oscilloscope OS-51/USM-24C

8. Comments or Suggestions

Any comments concerning omissions and discrepancies in this manual will be prepared on DA Form 2028 and forwarded direct to Commanding Officer, U. S. Army Signal Equipment Support Agency, Fort Monmouth, N. J., ATTN: SIGFM/ES-ML.
